"We are common from our interests come came out without , this a tragedy consequences eliminate reach and Island along socio-economic situation improvement of the region water and ecology with depends problems solution to find according to all our efforts our union must "

President: Shavkat Mirziyoyev

ABSTRACT: This article focuses on the current globalizing problem of the island sea and its impact on the environment, how to improve this situation. Today's in the day island the sea along situation improve for what affairs that it is being done knowing we can

KEY WORDS: Ecology, environment, globalization, assembly, region, innovative, points.

This thread pencil of our vibration because that is our country population and to us next door has been island to states as well own effect passing is coming effect as a result first of all Karakalpakstan population a lot suffering smoking is coming Island the sea himself Karakalpakstan Fur district in the area is located 20 th century in their heads this in the town life different was people happy full, tomorrow to the day has been confidence high it was that times island the sea the world according to big lakes ranked 4th and Caspian the sea with by joining standing, slowly slowness with water dry as a result present island "desert" appeared being the rest, the situation very aggravated you as you know the climate also has its own effect to hold started this reason the wind as a result salts into the air rising up storm harvest by doing to nature damage will deliver. This is the population health as well released the majority in humans lungs getting sick and another different diseases cause released . Island on the lives population such difficult in the situation yet still suffering living is coming From this another countries are also aware that's it because of September 2017 Uzbekistan at the 72 nd session of the UN General Assembly Republic President Shavkat Mirziyoyev the world community Island to the problem attention again one times looked at

Not only that region or one country global environmental problem problem that and present in the day this issue in solving to solidarity waist if we do not connect, this problem in the future echo gives , of course , deepens even more and he stressed that it will become more severe. Today's in the day in nature face giving anomalous events and anthropogenic of pressure increase as a result climate change whole the world community to the global problem turning around managed to Especially water resources scarce has been in the regions climate of changes product has been desertion processes fast is developing. Island of the sea fast dry while whole natural to a global change in conditions take came This is it ecological destruction consequences not only Uzbekistan or Central Asia region, perhaps is already global to the problem turning around managed to As a result Island to the issue has been approach sure to the results reach point of view in terms of fundamentally changed. Highlight OK , the last one in years our country Leader initiative with Islandside region tragedy negative consequences reduction, of the area socio-economic development and population marriage level increase regarding wide scope measures work come out and practice current is being done. From this except, current on August 24 of this year in Turkmenistan The island rescue international fund this is also mentioned in the summit to issues again attention given UN countries together have come without island the sea present of the day the situation to learn and help to give entered From this a lot soon " island to the desert". Saxophonist and in the sand grower plants seeds planting to the road was put Uzbekistan of the Republic all regions "island to the desert" saxophonist to plant help they gave many vehicles attraction done , that's it of the year 363 thousand in itself per hectare more than to the ground saxophonist seeds planted This year in itself Island of the sea dry to the field saxophonist planting 1 thousand 560 people in their jobs participation reached 462 techniques for these jobs attraction done Uzbekistan Republic President Sh.M. Mirziyoyev on February 22-23 , 2022 Karakalpakstan to the Republic done increased visit during Island of the problem negative effect mitigation, region population marriage condition and quality improve on, eng the main one is 3.5 mln hectares Island of the sea dry bottom soil-climate to the conditions customized plants fields expansion , in the area from the ground use productivity increas , water thrifty and salt reducing technologies current to do in 2022 as soon as possible practical things perform for belongs to assignments gave.

Figure 2 . Island of the sea in 1960 appearance

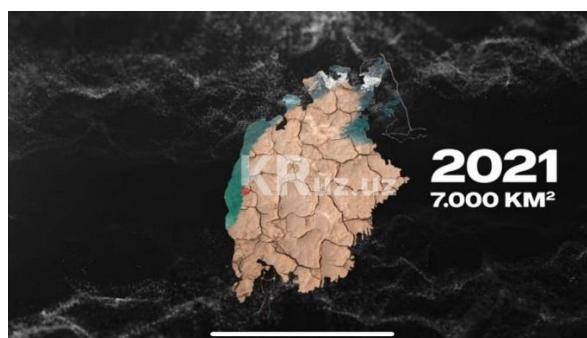

Figure 3 . in 2021 dry finished appearance

This attitude with Uzbekistan Republic Innovative development ministry Island of the sea dry at the bottom from lands use efficiency increase , water savings and salt reduce problems scientific the solution to provide there is scientific and innovative potential attraction reach in order to practical and innovative projects national choice announcement did Not only that projects and one row programs are also on the way put sent.

Region population points of transportation, engineering and communication infrastructure development , irrigation and external lighting networks improvement, Nukus and Urganch cities modern energy thrifty technologies current reached without heat supply systems improve to the road to put state to the program entered. Fur the population is also from it very satisfied In this district right now many affairs is being done for example big football stadiums, population for hospitals, schools education organizations, women girls for seam workshops are also employed is being downloaded affairs all population for tomorrow the future for actions being taken including.

Conclusion: Indeed, this ecological from disaster the most a lot Mole people suffering smoking is coming Especially July -August months extremely big dust into the air rises. Protection forests set up if done, this problems I'm done finds The population is also small though good lived dust less pollen it would be. Information in place to say maybe one saxophone 1.5-2 meters in diameter salts pressing stands We are like that by doing island of the sea everyone to the ground saxophonist axis how much sand pollen and of salts protection does Maybe island the sea previous to the case return maybe do not return that's it because of ecological situation difficult to the situation to come prevention take as above events by making to the climate effect to show hindrance what we do need This is us about our quest need our leak need climate to breakdown We are one against recognize one soul being our approach, measure thinking we find need Har one of us clean and pure the air ecology, environment neatness storage for from our hands until it arrives movement what we do need Own duties right understanding and given of possibilities reasonable use this each one of the person state and society in front of duty!
