

REFORMS IN MODERN MEDICINE IN UZBEKISTAN

Eshonov Ravshanbek Muxammadmusayevich

Abstract: President Shavkat Miromonovich Mirziyoyev signed the decision "On additional measures to improve the quality of medical services to the population and increase the capacity of personnel in the health sector". a number of tasks were given to further enrichment, allocation of loan funds for improving the qualifications of their specialists in leading foreign medical institutions. In 2022, 30 higher educational institutions of our country took place from this rating, and 7 of them are medical universities.

Key words: Medical universities, THE-organization, QS-organization, health, SamDTU, TTA, TPI, BDTI, international ISO certificate, Ministry of Health, Avicenna, psychiatry.

"The first happiness for a person is his health, the second is beauty," Aristotle said. Indeed, health is wealth. Only if our health is in place, we can live an active life, learn, and be advanced in every field. For this, first of all, we must be responsible for ourselves. In this, the role of medical workers is incomparable. For this reason, special attention is paid to the field of medicine in our country. A number of reforms are being implemented to attract qualified young personnel to the industry. First of all, attention is being paid to educational institutions of future doctors, so that if they successfully master the education, the medical field will develop more rapidly in our country. In particular, on October 18, 2021, the 800-seat SamDTI building was put into use on the "City of Samarkand" day. The construction of this object started in 2017 and was put into use in a short time. The building has 12 departments, more than 200 classrooms, 15 laboratory rooms, lecture halls, and all rooms are modernly equipped with electronic boards, IT devices and laboratory equipment. due to its high level, the international ratings of these educational institutions are increasing now. In particular, according to the results of the "University impact ranking" 2020 published by the Great Britain "THE"-Times Higher Education rating agency, it can be shown that the Tashkent Medical Academy took 301+ place in the direction of "Good health and well being". In 2022, 30 higher educational institutions of our country took place in this ranking, and 7 of them are medical universities. This series consists of the following universities:

- 1) Tashkent Medical Academy;
- 2) Tashkent Institute of Pediatric Medicine;
- 3) Samarkand State Medical University;
- 4) Tashkent State Dental Institute;
- 5) Tashkent Pharmaceutical Institute;
- 6) Andijan State Medical Institute;
- 7) Bukhara State Medical Institute.

A big meeting will be held that will cause big changes in the field of medicine in our country. During the visit of President Shavkar Miromonovich Mirziyoyev to Samarkand in March 2022, the proposal to organize the Samarkand State Medical University on the basis of the Samarkand State Medical Institute and grant the institute the status of a university showed that it was the result of long-term work, and it was joyfully and warmly received by the students and professors of the university. In addition, SamDTU has many achievements. This indicates the very high quality of education at the university. In June 2021, an international conference will be held at the Samarkand State Medical Institute. During the conference, the international level ISO certificate was handed over to the Samarkand State Medical Institute. This university was the first in our country to receive the international ISO certificate. In the same year, the 2nd clinic of SamDTI - the children's surgical center was the first among the state medical institutions to receive an ISO certificate. Also, a number of reforms were implemented to improve the education system of bachelor's, master's and clinical residency (residency) in the field of medicine, and medical universities Master's degree and bachelor's students in the 5th-6th year of education will be allowed to work in the primary and emergency medical care system on the basis of a referral. Of course, this initiative allows students to successfully conduct practice together with their studies. President Shavkat Miromonovich Mirziyoyev announced "Additional measures to improve the quality of medical services to the population and further increase the capacity of personnel in the health sector" The decision on" was signed. In this, a number of tasks were given to enrich the state medical institutions with modern medical equipment, and to allocate loan funds to improve the qualifications of their specialists in leading foreign medical institutions. Along with such reforms, special attention is paid to support and encouragement of medical university students and qualified doctors in our country. In particular, "SSV scholarship" was introduced by order of SSV, and this scholarship is intended to be given to undergraduate and master's students studying in higher medical institutions. In addition, famous scholarships such as "Rector's scholarship", "President's scholarship" have been established for medical university students. . Yesterday, an international conference on psychiatry, neurology, and neurosurgery was held at SamDTU. Specialists of scientific research centers of medical universities of Tajikistan, Kazakhstan, Kyrgyzstan, Russia, Uzbekistan are participating in the international conference. Such conferences and international meetings are organized in many universities of our country, and it is no exaggeration to say that such events serve as a special school for young scientists and medical workers. In fact, in our heavenly Uzbekistan, special attention is paid to every field, including the medical field, and all conditions have been created for field specialists and future doctors. The only thing that is required of us young people is to make good use of the conditions that are being created, to aim for high goals and to take quick steps towards these goals and the peaks of success. Then the medical field will develop further in our country, along with all sectors and branches, and the countries of the world will start to recognize us better. After all, we are descendants of one of the founders of medicine, our great grandfather Abu Ali ibn Sina, whose work "Laws of Medicine" known as "Avicenna", "Sheikh ur-Rais" was used as a textbook in European universities for several centuries. We grew up in the bosom of such a great person. And in order to be worthy of this name, we must never stop working
